Its amino acid sequence was deduced from a cDWA clone (AAT33801) isolated from a human peripheral blood lymphocyte library. Soluble, recombinant forms of the receptor (Partic. amino acids 1-320) can be prepd. in transformed host cells and used to regulate immune and inflammatory responses, in methods for suppressing rejection of grafted organs or tissue, and in assays of IL-17 and IL-17R.

                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                          This polypeptide comprises human full-length interleukin-17 CC receptor (IL-17R). A claimed method for reducing the amount of CC receptor (IL-17R). A claimed method for reducing the amount of CC contacting the cell with a soluble II-17R, especially claimed CC contacting the cell with a soluble II-17R, especially claimed CC peptide and extracellular domains of the respective full-length CC receptors. Recombinant soluble IL-17R polypeptides can be obtained CC using prokaryotic or eukaryotic (for glycosylated products) CC expression systems. A cDMA sequence coding for full-length human CC initric oxide production from cartilage-associated cells in CC individuals with osteoarthritis. Inhibitors of nitric oxide production, such as soluble II-17R, may therefore be useful to CC amellorate the effects of nitric oxide in osteoarthritis as well as a suntainmune and inflammatory diseases.

                                                                                                  This sequence represents a human interleukin-17 receptor (II-17R).

IL-17R polypeptides have immunoregulatory activity. They can be used for inhibiting T cell activation. In inhibiting T cell proliferation, or for inhibiting T cell activation. In particular they can be used for preventing or treating organ or graft rejection, autoimmune disease, allergy or asthma. They can also be used for the prevention or treatment of inflammatory disease in which activated T cells play a role or for inhibiting B cell proliferation or immunoglobulin secretion. The II-17 polypeptides can also be used as immunogens, reagents in in vitro assays, or as binding agents for affinity purification procedures.
                                                                                                                                                                                                                                                           Isolated interleukin-17 receptor DNA - used to develop products for treating e.g. organ or graft rejection, autoimmune disease, allergy, asthma or inflammatory disease

The receptor is a type I transmembrane protein which is referred as II-17R. Murine thymona EL4 (cells were found to express a component of a cDNA encoding the receptor was identified. The murine II-17R cDNA encoding the receptor was identified. The murine II-17R cDNA collate DNA encoding human II-17R by cross species hybridisation. The cDNA was used to creceptor may be used to regulate immune responses, for example to creceptor may be used to regulate immune responses, for example to cuseful as components of diagnostic or research assays. Such antibodies components of diagnostic or research assays. Such antibodies was also be used in affinity purification of the receptor.

                                                               CC CDNA library from T cell thymoma EL4 cells, which were identified as CC condition fusion proteins comprising human immunoglobulin Gl (IGG1) FC CC binding fusion proteins comprising human immunoglobulin Gl (IGG1) FC CC rejection of a grafted syngeneic or allogeneic organ or tissue in a graft CC rejection of a grafted syngeneic or allogeneic organ or tissue in a graft CC rejection of a grafted syngeneic or allogeneic organ or tissue in a graft CC with DNA encoding soluble IL-17R, so that expression of IL-17R by the CC with DNA encoding soluble il-17R, so that expression of rejection. Soluble CC engrafted organ or tissue results in suppression of rejection. Soluble CC IL-17R fragments comprise residues 1-322 of the murine IL-17R, residues CC IL-17R fragments comprise residues 1-320 of the surfue of the surfue of suppressing rejection of grafted organs or tissues in the recipient CC and for treating or preventing diseases like allergy, asthma and CC and for treating or preventing diseases like allergy, asthma and CC and for treating or preventing diseases like allergy, asthma and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY97181 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IL-17R; interleukin-17 receptor; soluble; CTLA-8; Herpesvirus saimiri;
HSV13; graft rejection; suppressor; immunosuppressive; anti-allergic;
anti-asthmatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human interleukin-17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-DEC-2000

This invention relates to an isolated and purified interleukin-17 receptor (IL-17R). A soluble IL-17 protein (CTLA8) and a herpesvirus stamiri (HVSI3) open reading frame (homologous to CTLA8) were expressed as fusion proteins comprising an immunoglobulin Fc region, and used to
                                                                                                                                           Interleukin-17 receptor protein useful for regulating immune and for preventing or treating organ or graft rejection, auto disease, allergy or asthma in human .
                                                                                                                                                                                                                               WPI; 2000-411205/

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     screen for the expression of the IL-17R. The screening identified the novel receptor of the invention. IL-17R is a type I transmembrane protein that exhibits antiinflammatory, immunosuppressive, antiasthmatic and antiallergic activities, and is an inhibitor of T cell proliferation dectivation. IL-17R can be used to regulate immune functions, and is useful for preventing or treating organ or graft rejection, autoimmune interleukin-17 receptor amino acid sequence represents the human interleukin-17 receptor amino acid sequence identified in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          181

                                                                                                                                                                                                                                                   181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention is directed towards assays for detection of interleukin-17 (IL-17), IL-17 receptor (IL-17R), and (antagonists or mimetics of) the interaction between IL-17 and IL-17R. The assay kit comprises an IL-17R and a detecting reagent. The method is useful for inhibiting useful for preventing or treating organ or graft rejection, autoimmune diseases, allergy, asthma and inflammatory diseases in which activated human IL-17R (hCTLA-8 receptor) polypeptide.

The present sequence is human Interleukin-17 receptor (IL-17R) or CC CTLA-8 receptor. Human IL-17R is isolated from a human peripheral CC CTLA-8 receptor. Human IL-17R is isolated from a human peripheral CC Imphocyte library by cross-species hybridisation.

CC Diood lymphocyte library by cross-species hybridisation. The invention relates to Interleukin-17 receptors (IL-17R), and their corresponding nucleic acid molecules. IL-17R is CC response. The invention is useful for suppressing rejection of a grafted CC argues. The invention is useful for suppressing rejection of a grafted CC response. The invention is useful for suppressing rejection of a grafted CC argues in a graft recipient. Soluble IL-17 (CTLA-8) receptors CC argues of itssue in a graft recipient. Soluble IL-17 fusion proteins argues of activated T-cells play a role. Soluble IL-17 fusion proteins argues of IL-17 activated T-cells play a role. Soluble IL-17 receptor. Derivatives of IL-17R CC argues of IL-17 receptor. Derivatives of IL-17R argues of IL

A novel interleukin-17 receptor (IL-17R) was identified by screening a cDNA library from T cell thymnoma EL4 cells, which were identified as binding fusion proteins comprising human immunoglobulin Gl (IgG1) FC binding fusion proteins comprising human immunoglobulin Gl (IgG1) FC protein or a homologous region and soluble IL-17 (CTLA-8) protein or a homologous rejection of a grafted syngeneic or allogeneic organ or tissue in a rejection of a grafted syngeneic or allogeneic organ or tissue to be graft recipient involves transfecting the organ or tissue to be transplanted with DNA encoding soluble IL-17R, so that expression of transplanted with DNA encoding soluble results in suppression of transplanted with DNA encoding soluble il-17R, and fragments of the murine IL-17R, residues 1-320 of the human IL-17R, and fragments of the extracellular domain that bind IL-17. The method is useful for regulating extracellular domain that bind IL-17. The method is useful for regulating
                                                                                                                                                                                          suppressing rejection of a grafted syngeneic or allogeneic organ tissue in a graft recipient for organ transplantation involves transfecting the organ or tissue with DNA encoding soluble interleukin-17R receptor
                                                                                                                                                                                                                                                                                                                                        07-AUG-1995;

CC A novel interleukin-17 receptor (IL-17R) was identified by screening a CC cDNA library from T cell thymona EL4 cells, which were identified as CC tegion and soluble IL-17 (CTLA-8) protein or a homologous (IGG1) FC CC Herpesvirus saimiri (HSV) protein, designated HSV13. Regulating an CC soluble IL-17R. Soluble IL-17R fragments comprises administering an CC soluble IL-17R. Soluble IL-17R fragments comprises residues 1-320 of the murine IL-17R, residues 1-320 of the human IL-17R, and fragments of the CC extracellular domain that bind IL-17. The method is useful for CC regulating an immunoresponse, for treating or preventing diseases like CR rafted organs or tissues in the recipient. Sequence does not appear in the specification. It was created CC from the full length murine IL-17R (see AAY97130) and the flag peptide XXX.

                                                                                                                                                                                                                                                                       The murine interleukin-17 receptor (IL-17R) (AAW04184) is a type I transmembrane protein that binds IL-17 (CTLA-8, see also AAW02386) and HVS13 (AAW02387), a viral homologue of IL-17. Its amino acid sequence was deduced from a cDNA clone (AAT33800) isolated from murine thymoma EL4 cells. Soluble, recombinant forms of the receptor (partic. amino acids 1-322) can be prepd. in transformed host cells and used to regulate immune and inflammatory responses, in methods and used to regulate immune and inflammatory responses, and in for suppressing rejection of grafted organs or tissue, and in assays of IL-17 and IL-17R.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 13
                  This polypeptide comprises mouse full-length interleukin-17 cc receptor (IL-17R). A claimed method for reducing the amount of cnitric oxide produced by a cartilage associated cell comprises cc nitric oxide produced by a cartilage associated cell comprises contacting the cell with a soluble IL-17R, especially claimed contacting the cell with a soluble IL-17R, especially claimed contacting the cell with a soluble IL-17R, especially claimed contacting the signal cc receptors. Recombinant soluble IL-17R polypeptides can be obtained cc using prokaryotic or eukaryotic (for glycosylated products) cc expression systems. A cDNA sequence (see AAV27591) coding for altric oxide production from cartilage-associated cells in fittic oxide production from cartilage-associated cells in fittic oxide production, such as soluble IL-17R, may therefore be useful to production, such as soluble IL-17R, may therefore be useful to cardinate the effects of nitric oxide in osteoarthritis as well can other disease conditions in which nitric oxide plays a role, c. g. autoimmune and inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW61271 standard; Protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mouse interleukin-17 receptor

IL-17R polypeptides have immunoregulatory activity. They can be used for particular they can be used for preventing T cell proliferation, or for inhibiting T cell activation. In rejection, autoimmune disease, allergy or astima. They can also be used for preventing or treating organ or graft activated T cells play a role or for inhibiting B cell proliferation or timmunoglobulin secretion. The IL-17 polypeptides can also be used or immunogens, reagents in in vitro assays, or as binding agents for affinity purification procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          121

The present invention relates to a novel receptor that binds Interleukin CC (17 (IL-17, also known as CTLA-8) and a Herpesvirus saimiri homolog, CC (17 (IL-17, also known as CTLA-8) and a Herpesvirus saimiri homolog, CC (17 (IL-17, Murine thymona EL4 cells were found to express a CC to as IL-17R. Murine thymona EL4 cells were found to express a CC (12 (IL-17). An EL4 mammalian expression library was screened CC and a cDNA encoding the receptor was identified. The present sequence CC (18 (IL-17R) protein. The cDNA was used to isolate DNA encoding CC (18 (IL-17R) by cross species hybridisation. The human IL-17R cDNA and CC protein are described in AAA61240 and AAY9941. Soluble forms of the CC suppress rejection of organ grafts. Antibodies to IL-17R consisting of CC amino acids I-322 of murine IL-17R or 1-320 of human IL-17R may be useful CC as components of diagnostic or research assays. Such antibodies may also be used in affinity purification of the receptor.

Database : SwissProt_39:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
